API specifications

The API Specification section provides a detailed overview of the technical components essential for integrating with the platform, including authorization scopes, data type definitions, and endpoint structures. This API represents a strategic evolution of the legacy Fitbit Web API, rebuilt on modern infrastructure to ensure a more stable and consistent developer experience.

Scopes

You must update your authorization request to use the Google Health API scopes. The scopes define whether your app supports read or write operations. Don't use scopes that are not needed for your app. You can always add more scopes later if the design of your app changes.

The Google Health API scopes are a HTTP URL beginning with https://www.googleapis.com/auth/googlehealth.{scope}. For example, https://www.googleapis.com/auth/googlehealth.activity_and_fitness.writeonly.

Scope mappings

Here is how the Fitbit Web API scopes map to the Google Health API scopes:

Table: Fitbit Web API to Google Health API scope mappings

Fitbit Web API Scopes	Google Health API Scopes
activity	.activity_and_fitness.readonly .activity_and_fitness.writeonly
blood_glucose	.health_metrics_and_measurements.readonly .health_metrics_and_measurements.writeonly
cardio_fitness	.activity_and_fitness.readonly .activity_and_fitness.writeonly
electrocardiogram	.ecg.readonly

heartrate	.health_metrics_and_measurements.readonly .health_metrics_and_measurements.writeonly
irregular_rhythm_notifications	.irn.readonly
location	.location.readonly
nutrition	.nutrition.readonly .nutrition.writeonly
oxygen_saturation	.health_metrics_and_measurements.readonly .health_metrics_and_measurements.writeonly
profile	.profile.readonly .profile.writeonly
respiratory_rate	.health_metrics_and_measurements.readonly .health_metrics_and_measurements.writeonly
settings	.settings.readonly .settings.writeonly
sleep	.sleep.readonly .sleep.writeonly
temperature	.health_metrics_and_measurements.readonly .health_metrics_and_measurements.writeonly
weight	.health_metrics_and_measurements.readonly .health_metrics_and_measurements.writeonly

Data types

Here is a list of Google Health API data types and how they map to the Fitbit Web API.

For more information on how data is reported for these types, see the Data presence and true zeros guide (/health/data-presence-and-true-zeros). This guide includes details on inactivity and on-wrist filtering.

Table: Fitbit Web API to Google Health API data type mappings

Fitbit Web API Data Type	Google Health API Data Type `dataType`

Activity Calories	Active Energy Burned (/health/reference/rest/v4/users.dataTypes.dataPoints#activeenergyburned) `active-energy-burned`
Active Zone Minutes	Active Zone Minutes (/health/reference/rest/v4/users.dataTypes.dataPoints#activezoneminutes) `active-zone-minutes`
Contains changes to the user's activity levels	Activity Level (/health/reference/rest/v4/users.dataTypes.dataPoints#activitylev `activity-level`
Elevation	Altitude (/health/reference/rest/v4/users.dataTypes.dataPoints#altitude) `altitude`
Blood Glucose	Blood Glucose (/health/reference/rest/v4/users.dataTypes.dataPoints#bloodglu `blood-glucose`
Body fat	Body Fat (/health/reference/rest/v4/users.dataTypes.dataPoints#bodyfat) `body-fat`
`caloriesOut` in each heart rate zone	Calories In Heart Rate Zone (/health/reference/rest/v4/users.dataTypes.dataPoints#caloriesinheartratezon `calories-in-heart-rate-zone`
Temperature (Core)	Core Body Temperature (/health/reference/rest/v4/users.dataTypes.dataPoints#corebodytemperature) `core-body-temperature`
HRV summary	Daily Heart Rate Variability (/health/reference/rest/v4/users.dataTypes.dataPoints#dailyheartratevariabilit `daily-heart-rate-variability`
SpO2 summary	Daily Oxygen Saturation (/health/reference/rest/v4/users.dataTypes.dataPoints#dailyoxygensaturation) `daily-oxygen-saturation`
Resting heart rate	Daily Resting Heart Rate (/health/reference/rest/v4/users.dataTypes.dataPoints#dailyrestingheartrate) `daily-resting-heart-rate`
Skin temperature	Daily Sleep Temperature Derivations (/health/reference/rest/v4/users.dataTypes.dataPoints#dailysleeptemperature `daily-sleep-temperature-derivations`
Distance	Distance (/health/reference/rest/v4/users.dataTypes.dataPoints#distance) `distance`

Electrocardiogram (ECG)	Electrocardiogram (ECG) (/health/reference/rest/v4/users.dataTypes.dataPoints#electrocardiogram) `electrocardiogram`
Recorded activity	Exercise (/health/reference/rest/v4/users.dataTypes.dataPoints#exercise) `exercise`
Floors	Floors (/health/reference/rest/v4/users.dataTypes.dataPoints#floors) `floors`
Food	Food (/health/reference/rest/v4/users.dataTypes.dataPoints#food) `food`
Food Measurement Unit	Food Measurement Unit (/health/reference/rest/v4/users.dataTypes.dataPoints#foodmeasurementunit) `food-measurement-unit`
Heart Rate	Heart Rate (/health/reference/rest/v4/users.dataTypes.dataPoints#heartrate) `heart-rate`
HRV Intraday	Heart Rate Variability (/health/reference/rest/v4/users.dataTypes.dataPoints#heartratevariability) `heart-rate-variability`
Irregular Rhythm Notifications (IRN)	Irregular Rhythm Notification (/health/reference/rest/v4/users.dataTypes.dataPoints#irregularrhythmnotifica `irregular-rhythm-notification`
Food Log	Nutrition Log (/health/reference/rest/v4/users.dataTypes.dataPoints#nutritionl `nutrition-log`
SpO2 Intraday	Oxygen Saturation (/health/reference/rest/v4/users.dataTypes.dataPoints#oxygensaturation) `oxygen-saturation`
VO2 Max value when the user runs	Run VO2 Max (/health/reference/rest/v4/users.dataTypes.dataPoints#runvo2m `run-vo2-max`
Activity time series minutes sedentary	Sedentary Period (/health/reference/rest/v4/users.dataTypes.dataPoints#seder `sedentary-period`
Sleep	Sleep (/health/reference/rest/v4/users.dataTypes.dataPoints#sleep) `sleep`
Steps	Steps (/health/reference/rest/v4/users.dataTypes.dataPoints#steps) `steps`

Activity time series swimming strokes	Swim Lengths Data (/health/reference/rest/v4/users.dataTypes.dataPoints#swimlengthsdata) `swim-lengths-data`
Activity `caloriesOut`	Total Calories (/health/reference/rest/v4/users.dataTypes.dataPoints#totalcalo `total-calories`
VO2 Max value	VO2 Max (/health/reference/rest/v4/users.dataTypes.dataPoints#vo2max) `vo2-max`
Weight	Weight (/health/reference/rest/v4/users.dataTypes.dataPoints#weight) `weight`

Endpoints

The REST endpoints adopt a consistent syntax for all data types.

- **Service Endpoint**: The base HTTP URL changes to https://health.googleapis.com.
- **Endpoint Syntax**: The Google Health API supports a limited number of endpoints, which can be used by most of the supported data types. This provides consistent syntax for all data types and makes the endpoints easier to use.
- **User Identifier**: Either the user ID or me should be specified in the endpoint syntax. When using me, the user ID is inferred from the access token.

Example: Here's an example of the GET Profile endpoint called using the Google Health API

GET https://health.googleapis.com/v4/users/me/profile

Endpoint mappings

See Google Health API data types (/health/data-types) table for a list of data types available and the API methods they support.

Fitbit Web API Endpoint Type	Google Health API

GET (Log | Summary | Daily Summary) where you are requesting a single day of data	**dailyRollup** method with **`windowSize`** = 1 day
GET (Intraday) where you are requesting granular data	**list** method
GET (Time Series) by Date or Interval	**rollUp** or **dailyRollUp** method including a date range
GET (Log List)	**list** method
CREATE & UPDATE Logs	**patch** method
DELETE Logs	**batchDelete** method
GET Profile	**users.getProfile** returns the user's specific information **users.getSettings** returns the user's units and timezones
UPDATE Profile	**users.updateProfile** modifies the user's specific information **users.updateSettings** modifies the user's units and timezones
Get User ID	**users.getIdentity** returns the user's Fitbit legacy and Google user ID.
Get Devices	**users.pairedDevices** returns the list of paired devices
Create Subscriptions	**projects.subscribers.subscriptions.create** manually creates a subscription
Delete Subscriptions	**projects.subscribers.subscriptions.delete** delete a subscription
Get Subscriptions List	**projects.subscribers.subscriptions.list** lists all subscriptions
